...SPECIFICATION desired mass of air per cylinder. The value of the stored learning correction is then **updated** as a function of the difference between the indicated actual and desired mass of air...

...indicated desired mass of air per cylinder. The quantity of intake air flowing into the **engine** is then controlled as a **function** of the sum of the **open** -loop value, the closed-loop value, and the learning correction value. Preferably, the open-loop...air per cylinder. This embodiment, however, adapts to these different operational and environmental conditions by **updating** the learning correction values associated with the different regions of engine operation. As a result, the open-loop value in combination with the properly **updated** learning correction value represents the desired position of the throttle for the corresponding region of...

...changing environmental conditions such altitude.

Advantageously, the value of the stored learning correction is periodically **updated**, when the engine continuously operates in the same region and a predetermined time has elapsed since the engine first began to operate in this region. This prevents **updating** of the learning correction during operating transitions that move the engine into different operational regions, and delays the **updating** until the engine is essentially in steady state operation in an operating region. Additionally, the period between **updating** in an operating region can be

Ginger R. DeMille

appropriately selected to give the engine sufficient time to respond to intake air flow adjustments, before the learning correction is **updated** to a new value.

Preferably, the value of the stored learning correction for a region of engine operation is **updated** based upon the integral or running summation of the difference between the indicated actual and...

...Thus, this embodiment is applicable to engines having both constant and variable air-fuel ratio **schedules**.

Preferably, a conventional mass air flow sensor can be employed to measure and derive the...

...SPECIFICATION titled "Dedicated Service Processor with Inter-Channel  
Communication Features";

EP-A-0355463 (SC-00495A), titled " **Timer** Channel with Multiple  
**Timer** Reference Features";

EP-A-0355363 (SC-00496A), titled "Integrated Circuit **Timer** with  
Multiple Channels and Dedicated Service Processor"; and

EP-A-0354998 (SC-00498A), titled " **Timer** Channel for use in a  
Multiple Channel **Timer** ".

Field of the Invention

The present invention relates, in general, to a **timer** channel with  
match recognition features. More particularly, the invention relates to a  
**timer** channel in which recognition of match events can be enabled or  
disabled during the servicing of the **timer** channel by a service  
processor and in which multiple matches to a single value are prevented.  
Background to the Invention

One of the fundamental functions performed by **timer** subsystems of  
microcomputers is a "match". A match event may be generally defined as  
occurring...

...free-running counter matches a value stored in a register. Most  
commonly, a prior art **timer** subsystem responds to a match event by  
either triggering a pre-selected signal transition at...

...interrupting a host processor, or both. The Motorola MC6801 microprocessor, as described in Bauer, C.: " **Timer** /counter **schedules** (mu)C interrupts - simply", Electronic Design, vol.28 (1980) May, No.11, Rochelle Park, pages 75-81, is an example of a prior art microprocessor that includes a **timer** subsystem with basic match capability".

In prior art **timer** subsystems, the set-up and generation of match events is relatively simple. Whenever the **timer** subsystem is enabled, each match of the counter and the register value produces the specified result. One need only write the desired value to the match register and enable the **timer** .

Such simple match generation logic suffers from several shortcomings in the context of a multi-channel autonomous **timer** subsystem such as the preferred embodiment of the present invention. One must resolve issues of potential match generation which occur during servicing of the **timer** channel by a service processor, multiple matches to a single value in the match register...

...the counter continuously cycles and the like.

EP-A-0 180196 describes a multiple channel **timer** subsystem which addresses some of these problems by permitting match events to occur only while...

...potentially indeterminate latency between the first instant at which the two values match and the **time** at which the **match event** is recognized.

Summary of the Invention

In accordance with the present invention there is provided a digital data processing system comprising a digital data processor and a **timer** subsystem, the **timer** subsystem further comprising: a free-running multi-bit **timer** providing a first multi-bit timing reference signal; a match register having an input and...

...selected signal being provided at the external terminal.

The present invention advantageously provides an improved **timer** channel for use in a **timer** subsystem.

An exemplary embodiment of the present invention will now be described with reference to...

...SPECIFICATION serves to position the exhaust nozzles so as to control the area of the discharge **opening** which is adjusted as a **function** of the **engine** 's operation schedule.

Suffice it to say that the burner fuel flow and area of...stability of the engine during these transients would inherently improve. The high pressure compressor also **experiences** a significant stall margin increase in the MAJ-IC mode (see fan map for similar results)

Obviously, since under the MAJ-IC mode schedule the engine is operating **at** higher speeds and temperatures, its response to a demand for increased power will significantly improve. This will **reduce** the engine thrust transient time which is very desirable in fighter aircraft.

To prevent inadvertent overusage **of** fuel unnecessarily, that is to shift from the MAJ-IC mode to the primary mode...

...SPECIFICATION aircraft engine's response characteristics and monitor several engine parameters in an attempt to properly **schedule** throttle rate during transients. Such systems have several disadvantages. Significant amounts of computer storage space are required to store

engine response characteristics. Further, the stored information must be **updated** for each new engine type. Also, because the engine data is for a nominal engine compensates for the dominant **time** constant of the **engine** 's WF to N2 transfer **function** . The resultant signal is multiplied by a gain that sets the desired loop response characteristic

Detailed Description

Detailed Description

TELEVISION PROGRAM TRANSMISSION  
**VERIFICATION** METHOD AND APPARATUS  
BACKGROUND OF THE INVENTION

Field of Invention

This invention relates generally to an improved method and apparatus for automatically identifying and **verifying** television broadcast programs,

Television broadcast programs are comprised essentially of first run or syndicated...

...of the sworn statement  
and the bill, those documents are compared manually,  
and if they **match** the commercial **time spot** is paid for,  
However, not all commercials are aired properly and/or at the proper...  
...for the advertising time...  
depends.

While the above discussion is directed to the identification and **verification** of commercials, similar problems exist for other type of programming, such as syndicated programs which...

Ginger R. DeMille

...commercials already  
incorporated.

Thus, there has been a long-felt need for a quick, total **verification** of television broadcast programs, which would serve to upgrade the performance of the transmitting stations and confirm the program airing **schedules**, This need was ...this invention form a improvement.

#### DESCRIPTION OF THE PRIOR ART

Attempts at automatic program airing

**verification** are known in the art. methods have been developed for automatic identification systems of programs...

... gas turbine engine following initial surge event modifies low pressure  
compressor bleed air flow rate schedule if estimated combustor  
discharge gas temp. is less than established transient temp.

14-Apr-05

1

03:42 PM

Abstract (Basic):

... compared to the established transient temperature limit. A low pressure compressor bleed air flow rate **schedule** is modified if the estimated combustor discharge gas temperature is less than the established transient temperature limit to improve and engine surge avoidance margin. An engine fuel flow rate **schedule** stored in non-volatile computer memory is modified if the estimated combustor discharge gas temperature...

... Modifies acceleration **schedule** to prevent future surge events and minimize impact on engine response time. Allows aircraft to fly until next normally scheduled maintenance period, thus reducing downtime...

**What you need to know about "Pegasus," Microsoft's upcoming handheld  
device. (Product Announcement)**  
Richter, Jeffrey  
Microsoft Systems Journal, v11, n10, p41(7)  
Oct, 1996  
DOCUMENT TYPE: Product Announcement ISSN: 0889-9932 LANGUAGE:  
English RECORD TYPE: Fulltext; Abstract  
WORD COUNT: 5391 LINE COUNT: 00412

... including the processor, the display, and the communications  
devices are shut off.  
Applications are not **notified** when the power is shut off and

consequently are not offered the ability to force...

...five days during which the machine was suspended.

Device drivers, on the other hand, are **notified** when the system is being suspended and do get the ability to veto the suspend...

...that drivers receiving incoming data (from a serial port, for example) will not lose data.

#### **Notifications**

Because Pegasus is a personal information manager, it has a special set of functions for **notifying** the user of various events. For example, a **schedule** application would ask how the user wants to be **notified** of a scheduled reminder. The application would call the new API `PegGetUserNotificationPreferences` to display a dialog box (see Figure 6) prompting the user for **notification** settings (see the sidebar for SDK information). Since different Pegasus hardware devices may support different **notification** mechanisms, the contents of this dialog box will vary depending on the device. Typical **notifications** are to flash an LED, play a sound, or display a message box.

After the user has selected the desired **notification** options, `PegSetUserNotificationPreferences` would be called to register the event and its time with the system. When the system detects that the **time matches** that of the **event**, the system places an icon on the taskbar. When the user clicks on the taskbar...

...icon from the taskbar. Then the application can show the user whatever it desires. A **schedule** application would show the name of the meeting and its location in a window. The...

...special hardware in the Pegasus platform that will wake up the machine when the internal **clock** reaches its specified time.

Pegasus also supports the ability to run an application when certain ...

**Fuzzy ignition timing control for a spark ignition engine**

Wang, W; Chirwa, EC; Zhou, E; Holmes, K; Nwagboso, C

Bolton Inst, GB

Proceedings of the Institution of Mechanical Engineers, Part D (Journal of Automobile Engineering), v214, n3, pp297-306, 2000

Document type: journal article Language: English

Record type: Abstract

ISSN: 0954-4070

ABSTRACT:

...the air-fuel mixture. In modern engines the ignition timing is generally controlled by fixed **open-loop schedules** as **functions** of **engine** speed, load and coolant temperature. It is desirable that this ignition timing can be adjusted...
